

## Single Acting Hydraulic Cylinder

### Function

Hydraulic Single Acting Cylinders are intended to manage flow or load in only one side of piston. So it will be with extended or retracted by means of hydraulic power. To return the cylinder there is need to have external load or spring load or heavy self-weight is needed. There needs These single acting cylinders must be fitted with valves which would allow flow in both directions, as there would be single flow line.

### Scope of Supply

Single acting cylinder 40 mm x 150 mm stroke
